

ultrasound slimming

MULTIWELL'S NEW CELLSONIC TREATMENT USES LOW-FREQUENCY ULTRASOUND TO REMOVE UNWANTED FAT.

About 90 percent of women and even some men battle with unwanted cellulite. The 'orange peel' or 'cottage cheese' appearance of the skin may be difficult to shake, but it's not impossible. Multiwell's Cellsonic Ultrasound System from France is a registered device with the Therapeutic Goods Administration for the reduction of body fat and cellulite.

The ultrasound creates a micro-massage effect causing the targeted fat cells to resonate (vibrate), transforming the stored fat to a liquid state; it facilitates the natural process of lipolic action (fat loss) and the introduction of the beta receptor to release the fat from the cell. The liquid fat can now be moved via lymphatic drainage or used by the body as a ready energy supply.

A qualified Cellsonic therapist performs all treatments, for areas such as the abdomen including flanks (love handles), thighs (inner and outer thigh) buttocks, men's chests, calves and knee fat.

A session lasts 30 minutes and works on both reduction of cellulite and circumference fat reduction. The Cellsonic has 12 cells that can be placed on the body simultaneously for an

all-over, set-and-forget treatment, which generates a warm sensation that is considered pleasant by most patients.

Results vary for each person but a measurable result will be achieved after the first session. Most people obtain a visual result after two to five sessions. Patients attest there is no post-treatment pain or discomfort. However, there are numerous positive side effects, such as relief of muscle soreness, fading of stretch marks and toning the skin.

Multiwell has several combination therapies that when coupled with the Cellsonic provide great results for the reduction of body fat and cellulite.

The Bioderm vacuum therapy system is a proven palpate and roll method which helps the body move the excess liquefied body fat through the lymphatic system to expedite the drainage effect and help with vascularisation, (when tissue is well supplied with blood) and client relaxation. This patented system has the added benefit of an essential oil and a smooth Teflon-coated head system so no costly body stocking is required. The device has six different sized heads so the whole body can be treated, including the face. The Bioderm has many built-in body programs, with continuous and pulsed energy, with pressure from 50 to 900 millibars.

Multiwell's cellsonic treatment

- uses low frequency ultrasound to remove unwanted fat in selected areas of the body.
- targets the abdomen including flanks (love handles), thighs (inner and outer thigh), buttocks, calves, knee fat and men's chest.
- results vary for each individual. A measurable result will be achieved immediately after the first session, and most people obtain a visual result after two to five sessions.
- gives optimal results when coupled with regular physical activity and a balanced diet.

For further information on where to have a treatment or, if you are a beauty therapist, how to maximise profits in your salon with the Multiwell cellsonic system call 1800 SYMMEDICS or visit www.symmedics.com
